

# Advanced Email Threat and Response Services

*DETECT, PREVENT, & REMEDIATE  
EMAIL THREATS*

Email is the number one attack vector, and threats are becoming more sophisticated. Advanced social engineering attacks, such as business email compromise, are designed to bypass traditional email defense technologies. Further protect from these attacks with automated threat response service to reduce the scope and amount of damage they can cause.

## Types of Attacks

### SCAMMING

With email scamming, cybercriminals use fraudulent schemes to defraud victims or steal their identity by tricking them into disclosing personal information.

### BLACKMAIL

Similar to the traditional blackmail, the attacker pretends to have taken access to the victim's email account, computer, or other files/property, and threatens to release damaging material (such as inappropriate pictures) in exchange for payment.

### SERVICE PHISHING

The attacker impersonates a familiar entity, like a bank or internet service provider, and asks the victim to click a link to log into their account to read an urgent message. The victim's login credentials are then stolen by the attacker.

## Why LRS?

Our solution filters email before it is delivered to your email solution. Together, we work with you to protect your data, devices, and employees from cyberattacks and to minimize the damage an attack can cause with rapid threat detection and remediation service.

## Solutions

### RAPID RESPONSE

When a malicious email is detected or reported, we will quickly search all delivered email, by sender or subject, to identify all your end-users that received the email.

### LIMIT DAMAGE

Identify all users that have received and actioned the malicious emails, notifies them with an automatic email with instructions to change their passwords and other necessary remediation actions.

### REMEDiate

Automatically delete email messages that contain malicious URLs or attachments, post-delivery. All emails containing the identified threat are moved from users' mailboxes into their junk folders. We will receive an alert notifying you of the incident.
